PERSONAL PROJECTS

CRM Application (Role-Based) (03/2024 - Present)

- **Technologies:** MongoDB, Express.js, React, Node.js (MERN)
- **Project Overview:** Developed a role-based Customer Relationship Management (CRM) application designed to streamline operations and enhance user experience across different roles, including **Super Admin, Admin, Medical Assistant, and Data Manager**.
- **Key Features:** **Role Management:** Implemented dynamic role-based access control, allowing users to perform actions based on their designated roles. **User Authentication:** Integrated secure authentication and authorization using JWT (JSON Web Tokens) to protect sensitive data. **Data Management:** Developed functionalities for managing client records, tracking interactions, and generating reports for better decision-making. **Responsive UI:** Designed a user-friendly interface using React, ensuring seamless navigation and accessibility across devices. **API Development:** Created RESTful APIs for data interaction, ensuring efficient data retrieval and manipulation. Developed separate dashboards for users and admins. Users can view and manage their orders. Admins have access to product management functionalities, including viewing, editing, adding new products.
